

THE CEO'S DESK IMA GRENADA PROCESSING REPORT

INTRODUCTION

IMA Grenada acknowledges the known challenges associated with delayed application processing times. However, recent initiatives have propelled the Agency towards notable improvements in this regard.

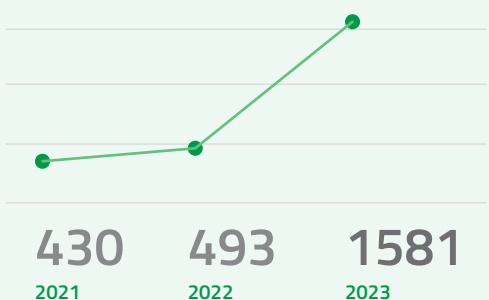

Through strategic allocation of resources and operational adjustments, the Agency can now report processing times for some 2023 and 2024 applications being completed within a timeframe of four (4) to six months.

Q1 PROCESSING GROWTH RATE 2021 -2024

Q1 2024 witnessed a remarkable surge in application processing rates, exhibiting an increase of over 300% compared to previous years. This remarkable achievement can be largely attributed to the implementation of a two-track processing system. This approach segregates backlogged applications from new submissions, allowing for tailored processing methodologies and expeditious resolution.

The apparent decrease in growth rate from Q1 2023 to Q1 2024 belies the underlying surge in application receipt observed in 2023. Notably, the growth trajectory from Q1 2022 to Q1 2024 signaled a significant expansion over the two-year period, increasing by 223%.

PROCESSING EFFICIENCY 2021-2023

In line with its commitment to efficiency and effectiveness, IMA Grenada has demonstrated a consistent upward trajectory in the annual volume of processed applications from 2021 to 2023. Despite the escalating influx of applications, the Agency has managed to not only maintain its operational standards but also improve processing rates.

This underscores its resilience and capacity to adapt to evolving demands in the investment migration landscape.
